

WEEK 8: SOLVING AN SDG PROBLEM WITH DATA.

SDG SELECTION

SDG 2: Zero Hunger

It aims to eliminate hunger, ensure food security, improve nutrition, and promote sustainable agriculture.

PROBLEM DEFINITION.

Problem: Food insecurity in rural areas.

Context: Several rural regions face food insecurity as a result of limited availability of nutritious food, a scarcity of agricultural resources, and ineffective distribution networks. This can result in malnutrition, stunted growth in children, and a higher incidence of disease.

Data Approach: This challenge will be solved by examining data on food production, distribution, access, and nutritional results in different regions.
